PRESS RELEASE
For Immediate Release

New Media Isolated Millivolt Pressure Sensors

April 2017

All Sensors Corporation of Morgan Hill, California has announced a brand new offering of **media isolated** pressure sensors. The latest product line released is the ceramic millivolt CPM 502 Series. These new pressure sensors offer design engineers excellent performance for various aggressive media applications.

The CPM 502 Series offers a ceramic pressure sensor with piezoresistive technology and flush diaphragm design. Product highlights include excellent chemical resistance and easy assembly into application specific packages.

Using thick-film technology, the measuring bridge is printed directly onto one side of the ceramic flush diaphragm. The structure-free backside can be directly exposed to the medium to be measured. Due to a high resistance to chemicals, additional protection is not necessary. On the basis of solid construction, these sensors are mostly unaffected by clamping effects after mounting, and therefore OEM customers can easily install them in different housings. The ceramic sensor has been especially designed for pasty, polluted, and aggressive media. Devices are available in 7.5, 15, 30, 75, 150, 300, 750, 1500, 3000, 6000 and 9000 PSI.

Product Features

- Pressure ranges 7.5 to 750 PSI gauge, 15 psi to 750 psi absolute 1500 to 9000 psi sealed gauge
- Piezoresistive Technology
- Dry Sensor — No Transfer Medium Needed
- Mechanical Robustness
- Excellent chemical resistance
- Flush Mounting Design
- Vacuum resistant

Electrical Features

- Supply voltage 2 to 30 V_{DC}
- Compensated mV output
- Ratiometric
- Total error better 0.4% FS

Applications

Ideal applications for this device are; pneumatic; hydraulics; plant and mechanical engineering; automotive; medical; marine shipbuilding; energy; environmental controls

Price

Contact factory for price. Samples are available for product testing.
